

# HP True Graphics

## Breakthrough video and graphics presentation for HP Thin Clients

HP True Graphics<sup>1</sup> offloads rich application and multimedia content to your HP Thin Client GPU HW decoder, delivering high frame rate images while boosting efficiency.

**Figure 1.** HP True Graphics technology process and H.264 data flow with an HP Thin Client.

## Without HP True Graphics

### Challenging for rich graphics and video presentation in the cloud

In today's remote cloud-computing environments, smooth streaming and high-quality presentation of HD video and 3D graphics are significant hurdles. IT and end users often experience poor graphics, slow frame rates, lag, heavy client CPU burden, and codec mismatches. Rich content remote redirection requires a strong server, a high bandwidth network to transmit the data, and an extremely powerful endpoint device to render the content. Current software solutions that attempt a resolution are extremely client CPU intensive and require high-performance endpoint devices. Today's high-performance endpoint devices, like PCs and workstations, aren't as secure and reliable as a thin client in VDI and cloud computing environments.

### The thin client demand

The industry solution has typically been multimedia offloading and server side rendering, yet each solution gives thin client users just enough capability for average quality video and graphics in a limited number of file formats. With increased industry adoption of H.264 as a popular format, the demand has grown stronger than ever for a more flexible, cost-effective and efficient solution.

## H.264 industry happenings

### H.264

The industry's most common video format for recording, compression, and distribution of video and graphics content is H.264. Today's modern GPUs offer H.264 accelerated decoding capabilities allowing rich content to be displayed on

most modern endpoint devices, like tablets and smartphones, without consuming massive amounts of CPU. HP True Graphics harnesses H.264 video and graphics content and redirects it to the GPU's HW decoder for smooth streaming and enhanced presentation on HP Thin Clients.

## With HP True Graphics

### Truly astounding cloud-based multimedia

HP True Graphics<sup>1</sup> gives HP Thin Client users the ability to view and manipulate cloud-based applications and multimedia content with smooth display and reduced lag. Enjoy high frame rates for large format applications, multi-video chat, and demanding programs like HD video, CAD, HTML5, and Silverlight.

### Key benefits

- Breakthrough video playback
- View and manipulate cloud-based applications and multimedia content
- Flexible solution that works with your Windows® - or HP ThinPro-based thin clients
- Redirect H.264 content straight to your GPU HW decoder
- Immediate keyboard and mouse responsiveness
- Low equipment burden and CPU utilization

HP True Graphics provides up to 2x the average frame rate at as low as 1/3<sup>rd</sup> of the typical thin client CPU utilization and with a single, simplified codec-based scheme.<sup>2</sup> This technology drastically reduces high client CPU usage that often can't keep up with today's heavy content demands resulting in a more responsive end-user experience and a more efficient IT environment.

## Citrix®, AMD and HP True Graphics

### A new solution for HP Thin Clients

Citrix virtualization with SuperCodec combined with HDX Pro offers an optimal redirection solution that leverages server GPUs to encode an entire compute screen into an H.264 stream. This stream is directed to the HP Thin Client with AMD hardware accelerated decoding capabilities. These two solutions allow select HP Thin Clients to optimally handle H.264 content when HP True Graphics is installed. Note: HDX Pro is not required to use HP True Graphics.

## HP Thin Client support

HP True Graphics requires an HP Thin Client with an HP ThinPro 5.0 or higher operating system (combo OS with HP Smart Zero begins at v5.0), or Windows (WES7E or Win10 IoT), AMD processing technology, and a Citrix virtual desktop infrastructure that must be XenApp or XenDesktop v7.0 or higher. Preinstalled on the OS starting with HP ThinPro 5.2, HP True Graphics will be available on HP ThinPro 5.0 or higher as an add-on through Easy Update for HP ThinPro or via HP Device Manager or included in the Citrix Receiver 4.4 for Windows as an add-on.

HP True Graphics is already pre-configured and ready to use. Upon installment, the end user can immediately start benefiting from an enhanced multimedia experience.
